compression and/or decompression phase and with a soft performance curve, that can be activated and deactivated individually or separately, hydraulically paralleling the flow-regulating and/or shock absorption systems.

- 6. Dashpot as in Claim 1, characterized in that the flow-regulating, flow-constricting, or shock-absorption systems are accommodated in a separate component, preferably in the form of a flow regulating block (41) outside the dashpot and communicating with it by way of hydraulic-fluid lines.
- 7. Dashpot as in Claim 1, characterized in that the flow-regulating, flow-constricting, or shock-absorption systems are accommodated in or on its piston (3).
- 8. Dashpot as in Claim 1, characterized in that the flow-regulating, flow-constricting, or shock-absorption systems are accommodated in or on its bottom valve (46).

REMARKS

Applicant has amended the claims to express them in more definite form to avoid multiple dependency.

A copy of the claims with markings to show the changes that have been made, is enclosed.

Respectfully submitted,

Max Fogiel
